DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 30, 2008 has been entered.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr Lawrence Galvin on May 21, 2008.

The application has been amended as followed:

In claim 10, the limitation of “generating a channel state selection control signal based....” should be changed to “**detecting co-channel interference adapted to generate** a channel state selection control signal based....” in line 6 of the claim.

In claim 10, the limitation of “wherein co-channel interference is detected using:” should be replaced by “wherein **the** co-channel interference is detected using:” in line 10 of the claim.

In claim 19, the limitation “during a given duration to output...” should be replaced by “during one symbol duration to output...” in lines 9 – 10 of the claim.

In claim 19, the limitation “during a given duration to output...” should be replaced by “during one symbol duration to output...” in lines 13 – 14 of the claim.

Allowable Subject Matter

Claims 1 - 22 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Re independent claims 1 and 10, the prior art of record does not disclose of wherein the co-channel interference detection unit detects co-channel interference using: a value calculated by multiplying a square of the magnitude of the channel frequency response and the error signal; and at least one coefficient information; and wherein the co-channel interference detection unit generates the channel state selection control signal based on a result of the detection.

Re independent claim 17, the prior art of record does not disclose of the interference detector comprising a multiplier, filter, subtractor, an accumulator, an averager and a logic unit to generate the selection control signal.

Re independent claim 19, the prior art of record does not disclose of the interference detector comprising a first and second multiplier, a first and second switching circuit, a first and second accumulator, a subtractor, an averager and a logic unit to generate the selection control signal.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ARISTOCRATIS FOTAKIS whose telephone number is (571)270-1206. The examiner can normally be reached on Monday - Thursday 6:30 - 4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh M. Fan can be reached on (571) 272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
